WORK EXPERIENCE

Senior Full-Stack Developer | E9ine | *Nov 2020 – Present*

Enterprise Authentication Platform

- Architected enterprise SSO using Okta and SAML 2.0 across 5+ applications, cutting authentication-related support tickets by 40%.
- Built centralized identity and session management using Passport.js, Node.js, and RBAC, eliminating redundant auth logic across services.
- Streamlined login workflows for 1,000+ enterprise users, improving onboarding time by ~30%.

Workflow And Asset Automation Platform

- Designed and delivered a repository-driven workflow orchestration platform (Node.js, Vue.js, GitLab APIs, MongoDB, MySQL) reducing manual pipeline setup from days to hours.
- Built a reusable module architecture enabling workflow composition, execution scheduling, and automated CI/CD pipeline triggering across 10+ client environments.
- Implemented webhook-based synchronization for real-time execution tracking, cutting workflow monitoring lag to under 2 seconds.
- Automated hardware and OS lifecycle tracking using Flexera One APIs, eliminating ~20 hours/month of manual auditing effort.

Repository Management Platform

- Built a secure GitLab repository cloning and permission management platform serving enterprise clients, reducing provisioning time by ~50%.
- Implemented template-based project creation workflows, cutting onboarding setup effort for new repositories from hours to minutes.

Dynamic Form Builder Platform

- Engineered a drag-and-drop form builder in Vue.js with Jira API integration for automated ticket creation, reducing form creation effort by 60%.
- Delivered customizable branding (themes, logos, footers) adopted by 8+ enterprise clients for self-service deployment.

Product Architecture & Strategic Initiatives

- Collaborated with business stakeholders during onsite workshops in London to define product roadmap and architecture for a multi-tenant transportation SaaS platform.
- Designed AI-assisted booking prediction architecture leveraging historical booking patterns and zone-based analytics for ride allocation optimization.

Real-Time Communication Infrastructure

- Built scalable WebSocket + Firebase + Google Pub/Sub infrastructure sustaining 10,000+ concurrent active connections with sub-100ms message delivery.
- Architected event-driven notification services for web and mobile platforms, reducing delivery latency by 40% vs. polling-based predecessor.

Quality Engineering

- Implemented Cypress end-to-end testing framework across critical workflows, growing automated test coverage from near zero to 90% and reducing production defects by 35%.

Mobile Application Development

- Developed and maintained Android and iOS WebView applications, delivering feature enhancements and performance improvements across customer-facing platforms.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
Frontend: Vue.js, React.js, Responsive Design, Component-Based Architecture
Backend: Node.js, Express.js, REST APIs, WebSockets, Passport.js
Databases: MongoDB, MySQL
Cloud & DevOps: Google Cloud Platform (GCP), Firebase, Docker, Git, GitLab CI/CD
Auth & Security: Okta, SAML 2.0, OAuth 2.0, JWT, RBAC
Integrations: Twilio, Stripe, Jira API, Firebase SDK, Flexera One API, GitLab API
Architecture: System Design, Distributed Systems, Event-Driven Architecture, Workflow Automation, Multi-Tenant SaaS, CI/CD Pipelines
Testing: Cypress, End-to-End Testing
Caching: Redis

EDUCATION

B.Tech – Computer Science & Engineering | CGPA: 7.4 / 10
Bankura Unnayani Institute of Engineering, West Bengal | 2016 – 2020
